

Best of all, Signature 4000 Series detachers are backed by your Bou-Matic dealer. Our factory-trained dealers work for you to make sure your new detachers are working to your specifications, and will keep them that way. Your Bou-Matic dealer can also keep the rest of your milking equipment maintained. For the best preventative medicine, let your dealer add you to their route or service program.

Working for You

Bou-Matic Signature 4000 Series detachers.

The next generation in non-metered electronic detachers featuring technology to take you into the new millennium.

Technology to take you into the new millennium, with traditional Bou-Matic quality and reliability

When you invest in detachers, you are investing in your future. Simply put, Bou-Matic Signature 4000 Series detachers allow you to milk more cows, more consistently, in a shorter amount of time. With a combination of proper management and the advanced technology of the Signature 4000 Series detachers you will be in a position to substantially increase your profits.

You can also rely on Bou-Matic Signature 4000 Series detachers to give your cows uniform milkouts. Now, no matter who is milking, you can rest assured that your cows will

be milked the same – not over-milked or under-milked.

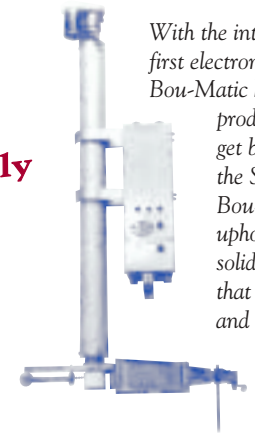

Automation based on good milking principles

Bou-Matic equipment has always rested squarely on the reputation of following good milking principles. Principles such as:

Milk cows quickly and gently

The Signature 4000 Series detachers live up to that reputation. With full-flow sensing and non-restrictive shut-off for reduced vacuum fluctuation and vacuum drop, your cows are

milked faster and safer. You can feel good about milking your cows with the Signature 4000 Series detachers, knowing these detachers will be as careful with your cows as you are.

With the introduction of the very first electronic detacher in 1974, Bou-Matic has built upon success – producing products that just get better and better. With the Signature 4000 Series, Bou-Matic continues to uphold its strong tradition of solid detachers. Detachers that milk your cows correctly and that last a long time.

Signature 4600 Model Detacher

A Bou-Matic air detacher with more functions than ever before.

- Stainless steel construction
- Pneumatic operation
- Electronic milk sensing
- LiquiKote™ electronic board moisture protection
- Stainless Steel retract chain
- 180-degree visibility Dome-Lite milking status indicators
- Commercial stainless steel push button controls
- Out-of-your-face claw drop for easier udder preparation
- Automatic retract hose support arm (optional)
- Curb Mount attach button (optional)*

The following settings are programmable on-site:

- Vacuum delay prior to attaching
- Milk let-down delay
- Unit take-off delay
- Retract delay
- Milk sweep delay
- Milk sweep on-time
- Maximum milking time setting

For the dairy operator who demands the utmost in performance, unsurpassed reliability, and outstanding milking.

Signature 4400 Model Detacher

A high performance vacuum detacher designed for heavy duty parlor use.

- Stainless steel construction
- Vacuum powered operation
- Electronic milk sensing
- LiquiKote™ electronic board moisture protection
- Nylon retract cord
- 180-degree visibility Dome-Lite milking status indicators
- Commercial stainless steel push button controls
- Out-of-your-face claw drop for easier udder preparation
- Curb Mount attach button (optional)*

The following settings are programmable on-site:

- Vacuum delay prior to attaching
- Milk let-down delay
- Unit take-off delay
- Retract delay
- Milk sweep delay
- Milk sweep on-time
- Maximum milking time setting

This is the industry's premier vacuum detacher – a vacuum detacher tough enough for the most demanding dairy operations.

Signature 4200 Model Detacher

An economical Bou-Matic stainless steel vacuum detacher with loads of functions.

- Stainless steel construction
- Vacuum powered operation
- Electronic milk sensing
- LiquiKote™ electronic board moisture protection
