

BOU-MATIC® FASTLANE™ 1 MILKING STALLS

Want to take the hassle out of milking? Get your cows to "hustle?" Then this may be the product for you. Bou-Matic Fastlane I milking stalls are designed to gently increase the speed of your cows both into and out of milking stalls without sacrificing operator time or energy.

The Fastlane I stalls use an S-shaped brisket beam that serves a dual purpose - moving cows and correctly positioning them for milking. First the brisket swings out of the way, allowing the cows to either enter or exit out of the stalls quickly. Then it swings back and gently pushes the cows against the rump shields until the cows are precisely placed. Now the operator can easily prepare the udder and attach the milking cluster for each cow.

THE BOU-MATIC FASTLANE I STALLS FEATURES AND BENEFITS

- Air-powered gates accelerate cow traffic. The openness of the parlor, combined with one-touch operation from the pit, make cows feel more comfortable and less inhibited, so they move into and out of the parlor quickly.
- The Fastlane I S-shaped brisket beams can be used with most existing conventional stalls to improve cow traffic. The Fastlane I conversion is an economical way to add years of life to your existing milking stalls.
- Moveable S-shaped brisket rails, with uniform indexing, position cows for easy preparation and milking.
- Stainless steel curbs for easy cleaning.
- Components, (brisket rails, rump shields, support posts, and entrance and exit gates), are first formed and then hot-dip galvanized, giving them a longer, more durable life.
- Suspended super structure that is operator friendly. The suspended rump shields prevent the operator from being pinched by the cows.
- Straight curbs and recessed walls that are designed for the comfort of the operator. The straight curbs allow easy access to the cow udders. The recessed walls keep equipment under the curb and out of the way, so the operator can work more freely.
